

Web Project Proposal Template

Course: Web Development Fundamentals (Web 1)

1. Project Title

Blogger Platform

2. Team Members

Name	Student ID	Role
Najm Al-Din (Leader)	202400213	Facilator, Gate Checker, Coordinator
Wazir	202400213	HTML Structure
Nawaf	202400213	CSS
Farooq	202400213	HTML Structure
Abdulrahman M.	202400213	JS

3. Project Description

This is a blogging and article management platform. It allows users to write, publish, edit, and delete articles. Users can manage their personal blog posts dynamically, and the application stores all the article data locally on the browser using `localStorage`.

4. Main Features

- Responsive layout for desktop and mobile screens.

- Navigation bar with a fixed header and dynamic menus.

- Article creation form with input validation (Title, Content, Cover Image).

- Save, edit, and delete articles using localStorage.

- Authentication UI design (Login/Signup interfaces).

9. Pages and Layout

- Landing Page (index.html): Introduction, floating animations, and navigation.
- Dashboard Page (home.html): Displays the list of saved articles with edit/delete controls and user profile stats.
- Add Article Page (create-artical.html): Form to add new articles or edit existing ones.
- Read Article Page (read-artical.html): Form to add new articles or edit existing ones.
- Authentication Page (login.html): Interactive Login and Sign-up forms.

10. Technology Stack & Tools

- HTML: Semantic structure for articles, forms, and navigation.
- CSS: Flexbox, media queries for responsiveness, and custom animations.
- JavaScript: DOM manipulation, localStorage integration, and event handling.

11. Timeline (2 Weeks)

Week	Tasks
1	Plan features, create wireframes, start HTML/CSS layout
2	Add JavaScript logic, localStorage, testing, final UI

12. Grading Rubric (Total: 100 Points)

Category	Points
HTML structure (semantic, correct)	
CSS styling & responsiveness	
JavaScript interactivity	
Use of localStorage (if required)	
Website design & layout (UI/UX)	
Code readability & comments	
Project completeness & functionality	
Group collaboration (clear roles)	
On-time submission	

13. Tips & Policies

- All team members must contribute.
- Use only frontend technologies taught in class.
- Avoid copying code from external sources.
- Submit code via GitHub (optional but recommended).

- Be ready to demo your project in class.
- All images/text must be copyright-free.

14. Mini Checklist (Per Team)

- ☐ Project idea approved by instructor
- ☐ Pages designed using semantic HTML
- ☐ CSS responsive for mobile and desktop
- ☐ At least one interactive feature with JavaScript
- ☐ If data is stored: uses localStorage
- ☐ All team members listed with clear roles
- ☐ Code is clean and commented
- ☐ Final version submitted before deadline
- ☐ Ready for live demo
